OTHER INFORMATION:

There is a 1 horsepower pump in the well. The pump pumps directly into about a 550 gallon black poly storage tank, which is inside a covered building. There are a couple of pre-filter devices before the tank. The water from the tank is gravity flowed into a water trough behind the building. The pump and all of the other well components seemed to be in good working order.

The well was pumped until the storage of the well itself was depleted. The water supply never bobbled or stopped. It had a good strong flow into the storage tank itself.

This was performed by Ellis Water Well Service - Christopher D. Ellis - License#54599PK - PO Box 914 - Llano, Texas 78643 - (325) 248-0588 Office - (512) 419-8418 Cell
