Orchard Development Opportunity  
Artois, CA

## Property Information

Location:	From Interstate 5, take the Artois Exit. Go West 2.5 Miles. Go North on County Road D for 2.0 miles. Go West on County Road 30 for 1.0 miles. The property will be on the left hand side of the road.
APN#:	Glenn County APN#: 024-220-033
Delineation:	The property has been delineated. There are approximately 15 acres deemed to be non-farmable due to environmental factors. The delineation was completed by Jody Galloway who has a fantastic reputation with both growers and government officials.
Soils:	The entire farm is comprised of various soil types. Please review the attached soils maps for more information. Helena Chemical also did soil sampling onsite. Those test results are available to qualified buyers upon request.
Water:	<p>There has been 1 agricultural test well dug on the subject property. The log suggests the well should produce approximately 2,500 GPM.</p> <p>Ag wells in the vicinity produce approximately 2,500 GPM as well.</p> <p>The property has been annexed into Orland Artois Water District. There is a siphon &amp; pump that services this property directly. There are no shared outlets. No irrigation scheduling with neighbors is needed with this property.</p>
Barn/Shop:	There is a well maintained barn located in the middle of the subject property. It's located in a secluded portion of the farm and cannot be seen from public roads. It is also where the test hole was dug. It would be an ideal location for the farm's headquarters.

Artois, CA

## Property Information

Leases:	No leases. The subject property is available for immediate possession
Oil, Gas & Mineral Rights:	All oil, gas, & mineral rights owned by the seller on the subject properties will transfer to the buyer at the close of escrow
Taxes:	The subject property is enrolled in the Williamson Act.
Prices:	\$11,900/acre or \$6,294,148
Terms:	Cash at the close of escrow
Comments:	Great opportunity to plant an almond, pistachio, or olive orchard. The soils & water suggest this has the potential to be a high yielding orchard. It's also hard to find blocks of ground larger than 100-200 acres in the Sacramento Valley. Dual source water supply, with lots of upside potential. Please call for a private showing today!

## MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:20,000.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service  
 Web Soil Survey URL:  
 Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Glenn County, California  
 Survey Area Data: Version 15, Sep 16, 2019

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Mar 30, 2017—Nov 4, 2017

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

Orchard Development Opportunity

Artois, CA

Land capability classification shows, in a general way, the suitability of soils for most kinds of field crops. Crops that require special management are excluded. The soils are grouped according to their limitations for field crops, the risk of damage if they are used for crops, and the way they respond to management. The criteria used in grouping the soils do not include major and generally expensive landforming that would change slope, depth, or other characteristics of the soils, nor do they include possible but unlikely major reclamation projects. Capability classification is not a substitute for interpretations that show suitability and limitations of groups of soils for rangeland, for woodland, or for engineering purposes.

In the capability system, soils are generally grouped at three levels-capability class, subclass, and unit. Only class and subclass are included in this data set.

Capability classes, the broadest groups, are designated by the numbers 1 through 8. The numbers indicate progressively greater limitations and narrower choices for practical use. The classes are defined as follows:

Class 1 soils have few limitations that restrict their use.

Class 2 soils have moderate limitations that reduce the choice of plants or that require moderate conservation practices.

Class 3 soils have severe limitations that reduce the choice of plants or that require special conservation practices, or both.

Class 4 soils have very severe limitations that reduce the choice of plants or that require very careful management, or both.

Class 5 soils are subject to little or no erosion but have other limitations, impractical to remove, that restrict their use mainly to pasture, rangeland, forestland, or wildlife habitat.

Class 6 soils have severe limitations that make them generally unsuitable for cultivation and that restrict their use mainly to pasture, rangeland, forestland, or wildlife habitat.

Class 7 soils have very severe limitations that make them unsuitable for cultivation and that restrict their use mainly to grazing, forestland, or wildlife habitat.

Class 8 soils and miscellaneous areas have limitations that preclude commercial plant production and that restrict their use to recreational purposes, wildlife habitat, watershed, or esthetic purposes.

## Rating Options

*Aggregation Method:* Dominant Condition

*Component Percent Cutoff:* None Specified
