10 Acres MOL

Custom Home Site & Commercial Land

Chilton, Falls County, TX 76632

Soil Type – 13

13—Branyon clay, 0 to 1 percent slopes. This deep, moderately well drained, nearly level soil is on narrow terraces along major streams. Slopes are smooth. Areas range from 15 to 500 acres in size.

This soil has a surface layer of very dark gray, moderately alkaline clay about 48 inches thick. Below the surface layer, to a depth of 66 inches, is dark gray, moderately alkaline clay. The underlying layer, to a depth of 80 inches, is grayish brown, moderately alkaline clay that has brown mottles.

This soil is sticky when wet and is difficult to work. When it is dry, it is hard and clods when plowed. Dense plowpan layers are common in cultivated areas. Permeability is very slow, and available water capacity is high. The root zone is deep, but penetration by plant roots is restricted by the clayey lower layers. Runoff is slow. The hazard of water erosion is slight.

Included with this soil in mapping are small areas of Houston Black, Heiden, and Lewisville soils. The Houston Black and Heiden soils are on uplands. The Lewisville soils are on steeper side slopes. The included soils make up 10 to 20 percent of this map unit.

This soil is used mainly for crops. The potential for this use is high. The major crops are cotton and grain sorghum, but corn and small grain are also grown. The major objectives in management are maintaining tilth and providing adequate surface drainage. Proper management includes growing crops that produce large amounts of residue and maintaining smooth surface gradients.

This soil has high potential for pasture. It is well suited to improved bermudagrass, kleingrass, and King Ranch bluestem. Proper pasture management includes fertilization, weed control, and controlled grazing.

This soil has high potential for range, but very few acres are used for this purpose. The climax plant community is tall grasses and an overstory of a few large live oak, elm, and hackberry trees along drainageways.

This soil has low potential for most urban uses. Limitations that affect urban development are shrinking and swelling with changes in moisture, low strength, corrosivity to uncoated steel, and slow percolation. Potential for recreation is low. The clayey surface layer and very slow permeability are the most restrictive limitations for this use. Potential for both openland and rangeland wildlife habitat is medium. Capability subclass IIw; Blackland range site.

10 Acres MOL

Custom Home Site & Commercial Land

Chilton, Falls County, TX 76632

Soil Type –14

14—Branyon clay, 1 to 3 percent slopes. This deep, moderately well drained, gently sloping soil is on narrow terraces along major streams. Slopes are plane or slightly concave. Areas range from 10 to 150 acres in size.

This soil has a surface layer of dark gray, moderately alkaline clay about 39 inches thick. Below the surface layer, to a depth of 48 inches, is gray, moderately alkaline clay. Between depths of 48 and 61 inches is grayish brown, moderately alkaline clay that has brown mottles. The underlying layer, to a depth of 80 inches, is light brownish gray, moderately alkaline clay that has yellowish brown mottles.

This soil is sticky when wet and is difficult to work. When it is dry, it is hard and clods when plowed. Dense plowpan layers are common in cultivated areas. The permeability is very slow, and the available water capacity is high. The root zone is deep, but penetration by plant roots is restricted by the clayey lower layers. Runoff is medium. The hazard of water erosion is moderate.

Included with this soil in mapping are small areas of Houston Black, Heiden, and Lewisville soils. Houston Black and Heiden soils are on uplands, and Lewisville soils are on steeper side slopes. The included soils make up 10 to 20 percent of this map unit.

This soil is used mainly for crops. The potential for this use is high. Cotton and grain sorghum are the main crops, but corn and small grain are also grown. The main objective in management is controlling erosion and improving tilth. Terracing and growing crops that produce large amounts of residue help control erosion and help maintain soil tilth.

This soil has high potential for pasture. It is well suited to improved bermudagrass, kleingrass, and King Ranch bluestem. Proper pasture management includes fertilization, weed control, and controlled grazing.

This soil has high potential for range, but very few acres are used for this purpose. The climax plant community is tall grasses and an overstory of a few large live oak, elm, and hackberry trees along the drainageways.

This soil has low potential for most urban uses. The limitations that affect urban development are shrinking and swelling with changes in moisture, corrosivity to uncoated steel, low strength, and slow percolation. The potential for recreation is low. The clayey surface layer and the very slow permeability are the most restrictive limitations for this use. Potential for openland and rangeland wildlife habitat is medium. Capability subclass IIe; Blackland range site.

10 Acres MOL

Custom Home Site & Commercial Land

Chilton, Falls County, TX 76632

Soil Type –36

36—Lewisville silty clay, 1 to 3 percent slopes. This deep, well drained, gently sloping soil is on terraces along the major streams. Slopes are plane and convex. Areas are long narrow bands or irregular in shape and range from 15 to about 100 acres in size.

This soil has a surface layer of dark grayish brown, moderately alkaline silty clay about 15 inches thick. Between depths of 15 and 34 inches is brown, moderately alkaline silty clay. Between depths of 34 and 50 inches is strong brown, moderately alkaline silty clay. Below this layer, to a depth of 65 inches, is light brown, moderately alkaline silty clay.

This soil has good tilth and is easily worked. Permeability is moderate, and available water capacity is high. The root zone is deep and easily penetrated by roots. Runoff is medium. The hazard of water erosion is moderate.

Included with this soil in mapping are a few areas of Lewisville soils that have slopes of less than 1 percent and some Lewisville soils that have been slightly damaged by erosion. Also included are a few intermingled areas of Altoga, Ferris, and Heiden soils. The included soils make up about 10 to 20 percent of this map unit.

This soil has high potential for production of crops. The major crops are cotton and grain sorghum, but corn and small grain are also grown. The main objectives of management are controlling erosion and improving tilth. Terracing and growing crops that produce large amounts of residue or deep-rooted legumes help to control erosion and maintain tilth.

This soil has a high potential for pasture. It is well suited to coastal bermudagrass, kleingrass, and weeping lovegrass. Pasture management includes fertilization, weed control, and controlled grazing.

This soil has high potential for range. The climax plant community is a mixture of tall and mid grasses, an overstory of hackberry, elm, and pecan trees along drainageways; and scattered oak trees.

This soil has low potential for most urban uses. Its most restrictive limitations are shrinking and swelling with changes in moisture, corrosivity to uncoated steel, and low strength. The potential for recreation is medium. The most restrictive limitation for this use is the clayey surface layer. Potential for both openland and rangeland wildlife habitats is medium. Capability subclass IIe; Clay Loam range site.

Information About Brokerage Services

Texas law requires all real estate licensees to give the following information about brokerage services to prospective buyers, tenants, sellers and landlords.

TYPES OF REAL ESTATE LICENSE HOLDERS:

- **A BROKER** is responsible for all brokerage activities, including acts performed by sales agents sponsored by the broker.
- **A SALES AGENT** must be sponsored by a broker and works with clients on behalf of the broker.

A BROKER'S MINIMUM DUTIES REQUIRED BY LAW (A client is the person or party that the broker represents):

- Put the interests of the client above all others, including the broker's own interests;
- Inform the client of any material information about the property or transaction received by the broker;
- Answer the client's questions and present any offer to or counter-offer from the client; and
- Treat all parties to a real estate transaction honestly and fairly.

A LICENSE HOLDER CAN REPRESENT A PARTY IN A REAL ESTATE TRANSACTION:

AS AGENT FOR OWNER (SELLER/LANDLORD): The broker becomes the property owner's agent through an agreement with the owner, usually in a written listing to sell or property management agreement. An owner's agent must perform the broker's minimum duties above and must inform the owner of any material information about the property or transaction known by the agent, including information disclosed to the agent or subagent by the buyer or buyer's agent.

AS AGENT FOR BUYER/TENANT: The broker becomes the buyer/tenant's agent by agreeing to represent the buyer, usually through a written representation agreement. A buyer's agent must perform the broker's minimum duties above and must inform the buyer of any material information about the property or transaction known by the agent, including information disclosed to the agent by the seller or seller's agent.

AS AGENT FOR BOTH - INTERMEDIARY: To act as an intermediary between the parties the broker must first obtain the written agreement of each party to the transaction. The written agreement must state who will pay the broker and, in conspicuous bold or underlined print, set forth the broker's obligations as an intermediary. A broker who acts as an intermediary:

- Must treat all parties to the transaction impartially and fairly;
- May, with the parties' written consent, appoint a different license holder associated with the broker to each party (owner and buyer) to communicate with, provide opinions and advice to, and carry out the instructions of each party to the transaction,
- Must not, unless specifically authorized in writing to do so by the party, disclose:
 - o that the owner will accept a price less than the written asking price;
 - o that the buyer/tenant will pay a price greater than the price submitted in a written offer; and
 - o any coincidental information or any other information that a party specifically instructs the broker in writing not to disclose, unless required to do so by law.

AS SUBAGENT: A license holder acts as a subagent when aiding a buyer in a transaction without an agreement to represent the buyer. A subagent can assist the buyer but does not represent the buyer and must place the interests of the owner first.

TO AVOID DISPUTES, ALL AGREEMENTS BETWEEN YOU AND A BROKER SHOULD BE IN WRITING AND CLEARLY ESTABLISH:

- The broker's duties and responsibilities to you, and your obligations under the representation agreement,
- Who will pay the broker for services provided to you, when payment will be made and how the payment will be calculated.

LICENSE HOLDER CONTACT INFORMATION: This notice is being provided for information purposes. It does not create an obligation for you to use the broker's services. Please acknowledge receipt of this notice below and retain a copy for your records.
